

A professional cleaning partner for your solar maintenance packages

Solar panel cleaning for solar installers, maintenance providers and asset managers in Johannesburg

Strengthen your solar maintenance offering with professional panel cleaning from Aqua-Pole Cleaning. We provide a dedicated cleaning service that can be incorporated into your maintenance packages, helping your clients manage dirt build-up and maintain energy performance.

Add value to your maintenance offering

Dust, bird droppings, pollen and other deposits can obstruct sunlight and reduce electricity generation. Cleaning helps recover output lost through surface soiling, with the benefit depending on site conditions and the extent of build-up.

Including panel cleaning in your maintenance packages can help you:

- **Support energy performance:** Reduce avoidable generation losses caused by dirty panels.
- **Offer a more comprehensive service:** Combine panel cleaning with your technical inspections, monitoring and maintenance.
- **Improve client convenience:** Give customers a coordinated maintenance solution through one service provider.
- **Support ongoing customer relationships:** Include cleaning in recurring maintenance agreements.

- **Extend your service capacity:** Access a dedicated cleaning team without establishing an in-house cleaning operation.

Professional cleaning with careful handling

Aqua-Pole Cleaning uses pure filtered and de-ionised water and soft water-fed brushes to gently loosen and rinse away surface dirt. Cleaning methods are selected with regard to the panel manufacturer's guidance and the conditions at each installation.

Our team is **trained to work at heights**. We assess access requirements before starting and use water-fed poles from ground level where suitable.

A service that fits your maintenance programme

Partner with us to incorporate cleaning into scheduled maintenance visits or arrange once-off cleaning where build-up has been identified.

Cleaning frequency can be planned around each installation's exposure to dust, nearby construction, bird activity, rainfall and observed generation performance. This helps create a practical service schedule suited to your clients' properties.

You manage the technical maintenance and client relationship; Aqua-Pole Cleaning provides the specialist cleaning component.

Let's strengthen your solar maintenance offering

Contact Aqua-Pole Cleaning to discuss subcontracting arrangements, recurring cleaning schedules and quotations for your client portfolio.
